**FAST RADIUS**

# What is texturing?

**One unique advantage of additive manufacturing is the ability to digitally apply 3D textures to the surface of parts. This can provide value in a variety of ways:**

- Cost savings compared to texturing injection molds
- Ability to apply texture to any geometry without draft angle limitations
- Improved surface aesthetic over untextured parts
- Mass customization of products
- Functional improvements (i.e. grip, tactile quality, acoustics)

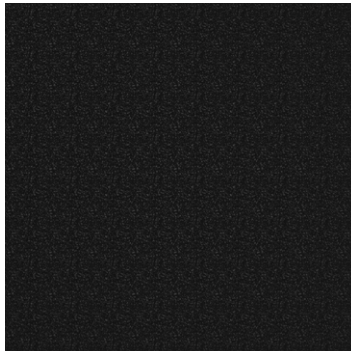

## Fast Radius Texture Offerings

At Fast Radius, we have created a set of standardized textures to make it easier and faster to take advantage of this unique capability of additive. Taking your part to the next level is as simple as choosing a texture from our standard set and defining which faces to texture; our engineers will take care of the rest!

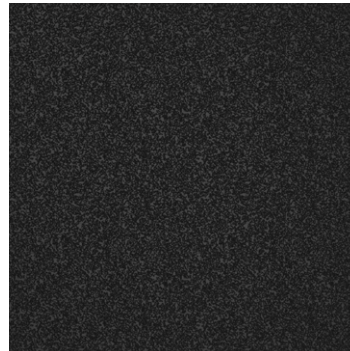

Learn more about how you can incorporate texturing in your design to enhance your products.

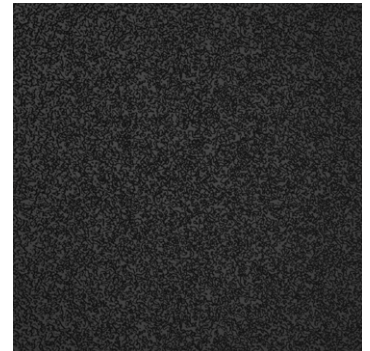

## **NOISE**

**FINE**
